Dear Alan:

I am delighted that you and Dan are organizing a second FASEB meeting on "Chromatin and Transcription." The first such meeting, organized by Gordon Hager and Michael Grunstein was excellent - very stimulating and lots of challenging ideas. We were able to develop two new collaborative projects from that meeting - always a good sign - and I know others had similar experiences. As you point out, the new findings resulting from a combination of genetics, molecular biology, biochemistry and cytology make this a very interesting time in the study of chromatin structure and function. I am particularly intrigued with Herskowitz's finding in the yeast SWI/SIN system and the possible parallels in Drosophila (see Cell, 2/7/92). I have marked the date, and will be most happy to assist in the meeting in any way.

Sincerely yours,

Sarah C.R. Elgin
Professor of Biology

Dear Alan,

Thank you very much for your invitation to the FASEB meeting on "Chromatin and Transcription" next year. I would love to attend since I thought that the meeting last year was well worthwhile. There may be one problem, however. I might go to Australia in the summer of 1993, although at the moment we haven't decided when.

If I can't go I would like to send a very talented Postdoc who is working on the chromatin project. If that is ok, then one of us will attend.

With best wishes.

Yours sincerely,

Bruce Stillman
Assistant Director
